Tooling

Kubernetes
 Docker
 Public clouds

description

Our seasoned adWISE trainers possess extensive industry experience and provide instruction on cutting-edge tools and platforms. Our specialized course offerings include:

- 1. Kubernetes and Docker Training (3 days):** Diving into container orchestration, cluster management, and deployment strategies
- 2. Infrastructure Automation with Terraform (1 day):** Mastering Infrastructure as Code (IaC), resource management, and state manipulation
- 3. CI/CD with Jenkins (1 day):** Exploring pipeline creation, configuration management, and integration with other tools
- 4. CI/CD with Azure DevOps (1 day):** Delving into build and release pipelines, artifact management, and Azure-specific features

These courses are designed to equip your team with practical knowledge and expertise, foster a culture of collaboration, and facilitate digital transformation. By partnering with us, you can be confident that your team will emerge as more proficient, collaborative, and agile, ready to tackle the challenges of the modern DevOps landscape.

motivations

- ▶ A need to adopt new technologies, in case when operations teams lack the necessary know-how

prerequisites

- ▶ Basic know-how in containerization technologies
- ▶ Basic scripting competency

references

- ▶ Papara
- ▶ Pudo

deliverables
